
(a) Accuracy (higher is better): CAS minus Vanilla RAG
Study 1 (n = 200): attack, no metadata [v1]
Study 1 (n = 200): attack, noisy metadata [v1]
Study 2 (n = 200): stronger attack, no metadata [v1]
Study 2 (n = 200): stronger attack, noisy metadata [v1]
Study 3 (n = 500): clean retrieval [v1]
Study 5 (n = 150): copy attack, no metadata* [v2]
Study 5 (n = 150): written attack, no metadata* [v2]
Study 5 (n = 200): clean retrieval [v2]
Study 6 (n = 700): HotpotQA [v2]
Study 6 (n = 200): MuSiQue [v2]
−0.25 −0.20 −0.15 −0.10 −0.05 0.00 0.05 0.10
(b) Poison adoption (lower is better): CAS minus Vanilla RAG
Study 1 (n = 200): attack, no metadata [v1]
Study 1 (n = 200): attack, noisy metadata [v1]
Study 2 (n = 200): stronger attack, no metadata [v1]
Study 2 (n = 200): stronger attack, noisy metadata [v1]
Study 5 (n = 150): copy attack, no metadata [v2]
Study 5 (n = 150): written attack, no metadata [v2]
−0.4 −0.3 −0.2 −0.1 0.0 0.1
(c) Wrong answers (lower is better): CAS minus Vanilla RAG
Study 5 (n = 200): clean retrieval [v2]
Study 6 (n = 700): HotpotQA [v2]
Study 6 (n = 200): MuSiQue [v2]
−0.20 −0.15 −0.10 −0.05 0.00
Difference from Vanilla RAG on the same questions (95% bootstrap CI)
Llama 3.2 3B
Gemma 3 4B
not significant (Holm p ≥ 0.05)
CAS v1 (conflict-preserving)
CAS v2
